A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Open

Ticket comments

Investigation findings:

The phishing alert was investigated, and the suspicious email was found to contain an executable attachment named `bfsvc.exe`. The email claims to be an application for an Infrastructure Engineer position and includes a password-protected attachment, with the password provided in the email body.

VirusTotal analysis:
The file hash was checked using VirusTotal. The results show that 51 security vendors detect the file as malicious, confirming that the attachment poses a malware threat.

Known malicious SHA-256 hash:
`54e6ea47eb04634d3e87fd7787e2136ccfbcc80ade34f246a12cf93bab527f6b`

Reason for escalation:
The attachment has been identified as malicious based on the VirusTotal detection results. If opened or executed, it could compromise the recipient's system.

Recommended actions:

- Escalate the incident to a Level 2 SOC analyst.
- Investigate whether the recipient opened the attachment or executed the file.

- Determine whether the recipient's system requires further investigation.
- Follow the organization's incident response procedures.

Final ticket status: Escalated
