

Cybersecurity Incident Report

Section 1: Identify the type of attack that may have caused this network interruption

One potential explanation for the website's connection timeout error message is: The server is overload with several request without finish the connection

The logs show that: There's a request from a real client but also there's someone who's just asking

This event could be: a DoS(Denial of Service) attack

Section 2: Explain how the attack is causing the website to malfunction

When website visitors try to establish a connection with the web server, a three-way handshake occurs using the TCP protocol. Explain the three steps of the handshake:

1. SYN

2. SYN-ACK

3. ACK

Explain what happens when a malicious actor sends a large number of SYN packets all at once: the server can be overwhelming with half opening connection

Explain what the logs indicate and how that affects the server: the logs says that theres an error of connection because theres a lot of requesting, and make other connection go on time-outs
